

THE PROBLEM

Your team does not need **more tabs.**

Every context switch turns one decision into a slow chain of copying, pasting and repeating.

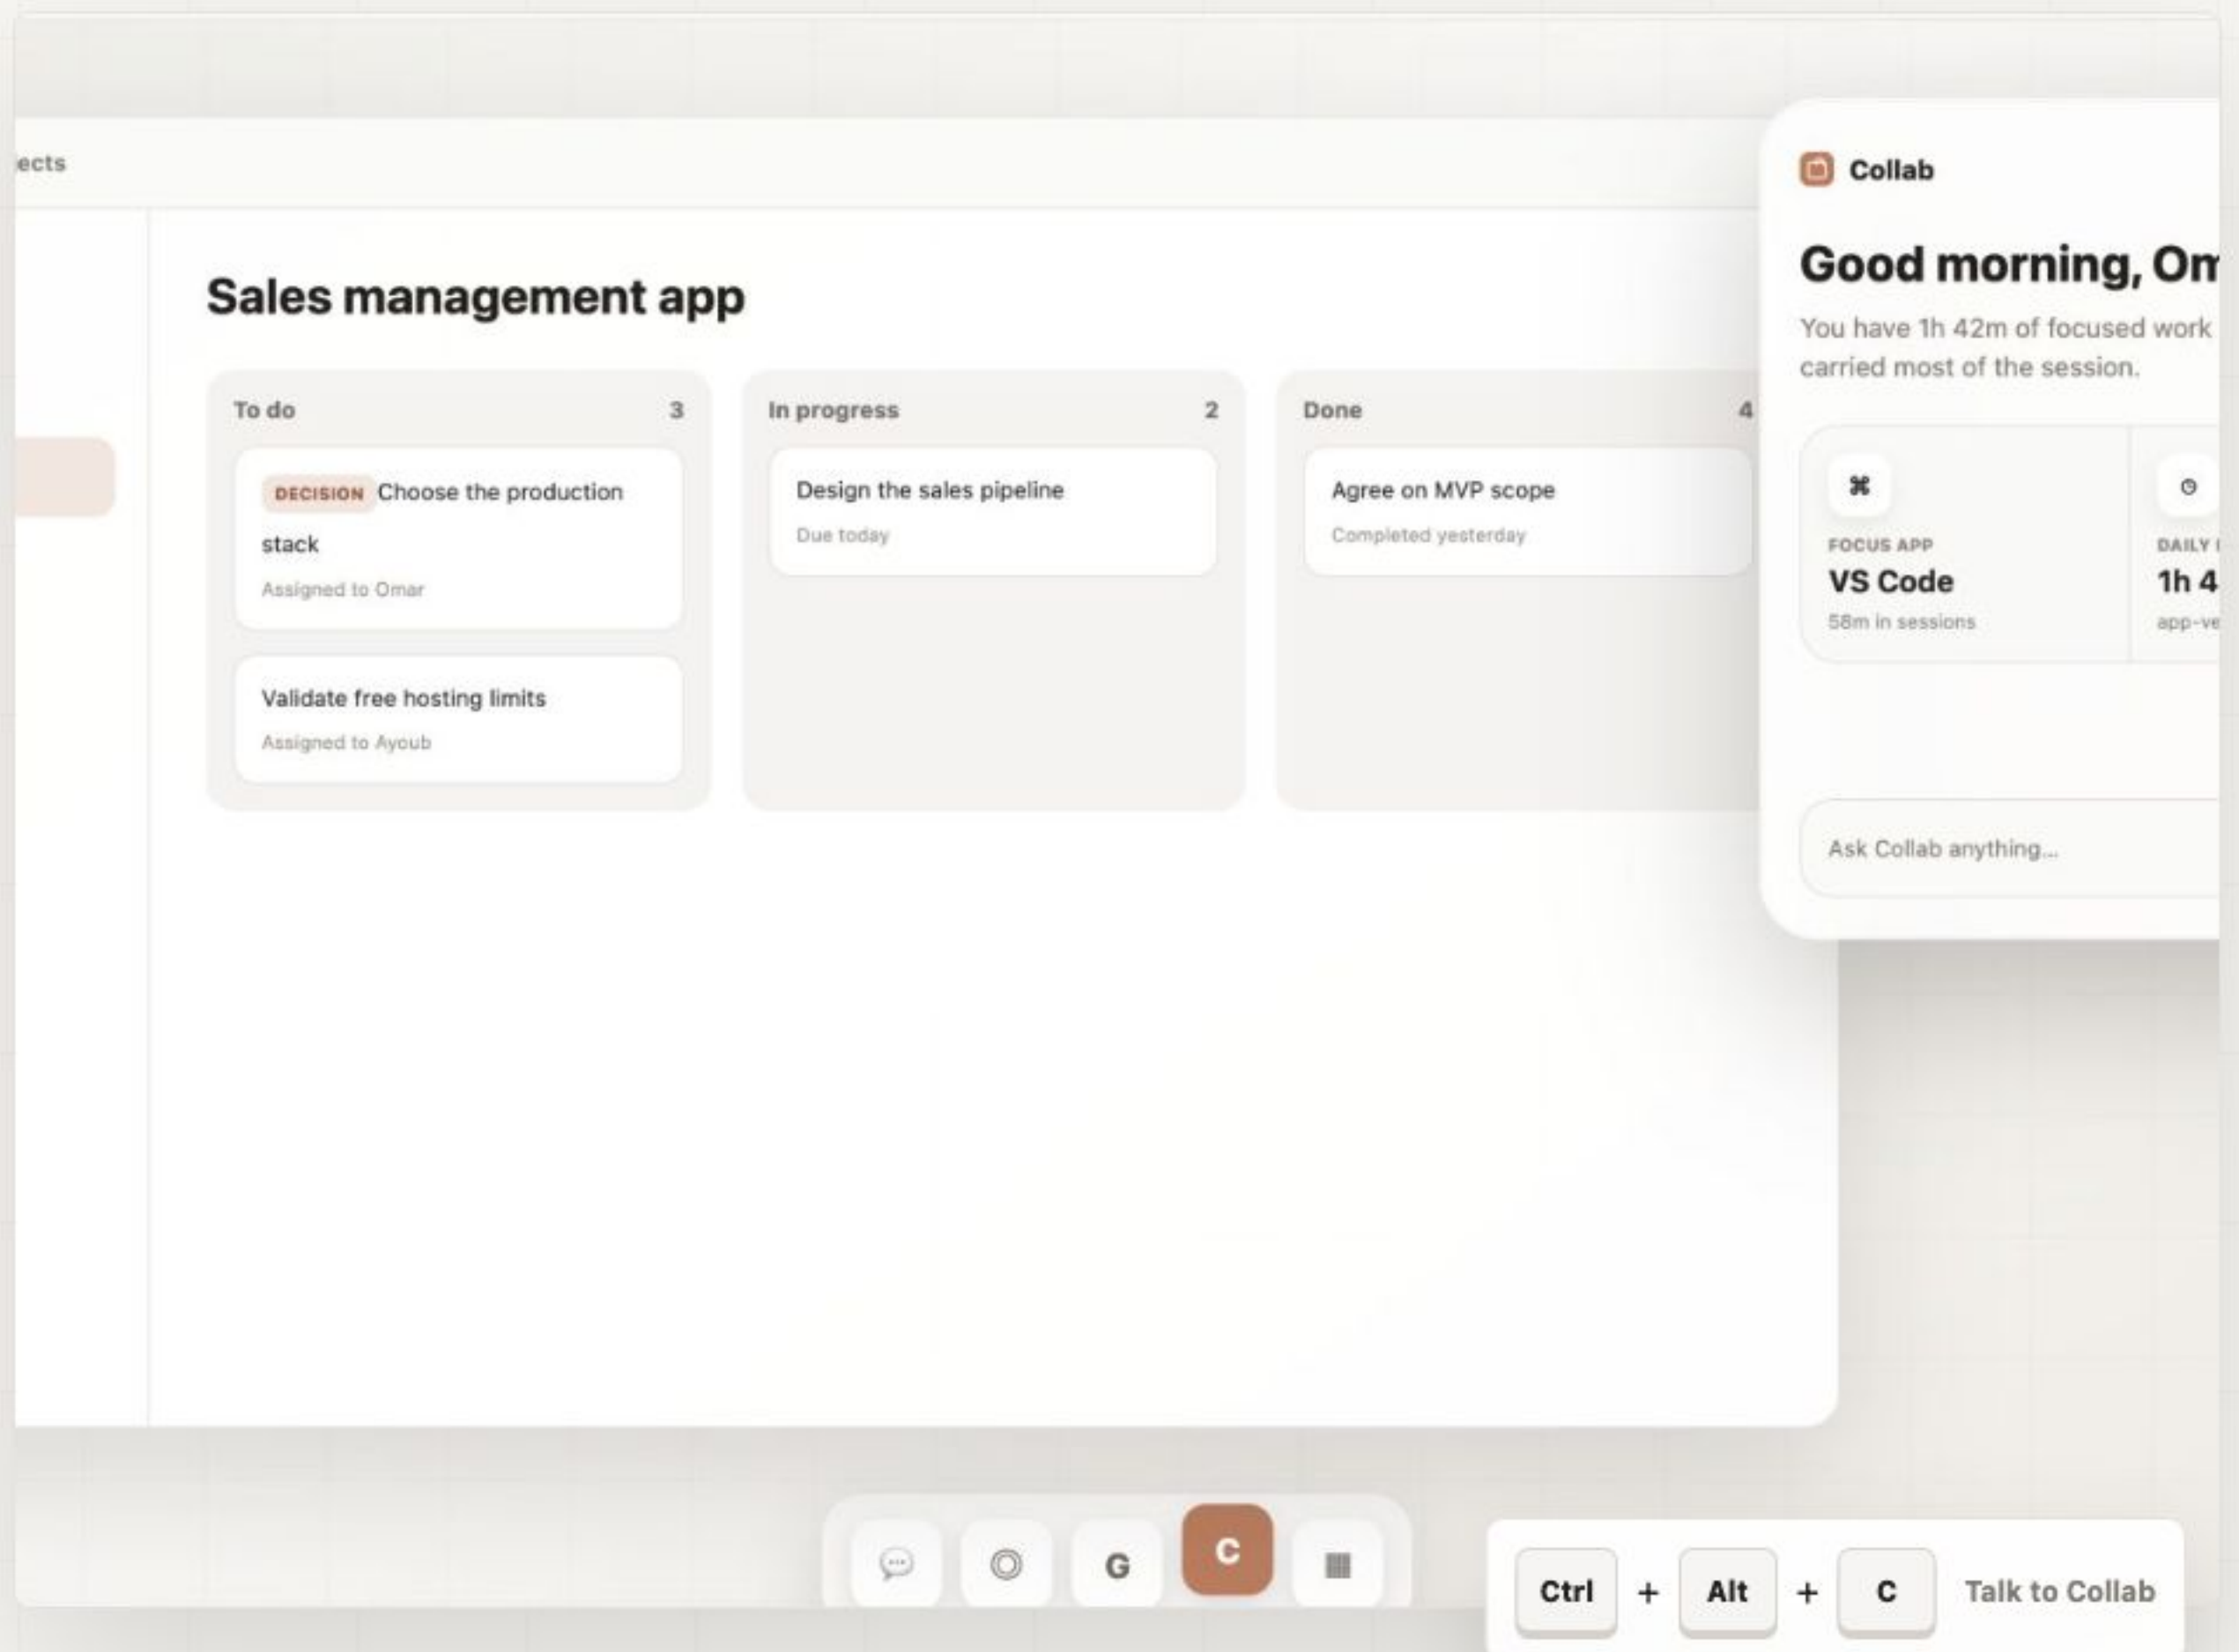

Chat → AI → Copy → Switch → Paste → Repeat

THE DESKTOP WIDGET

Collab lives **where work happens.**

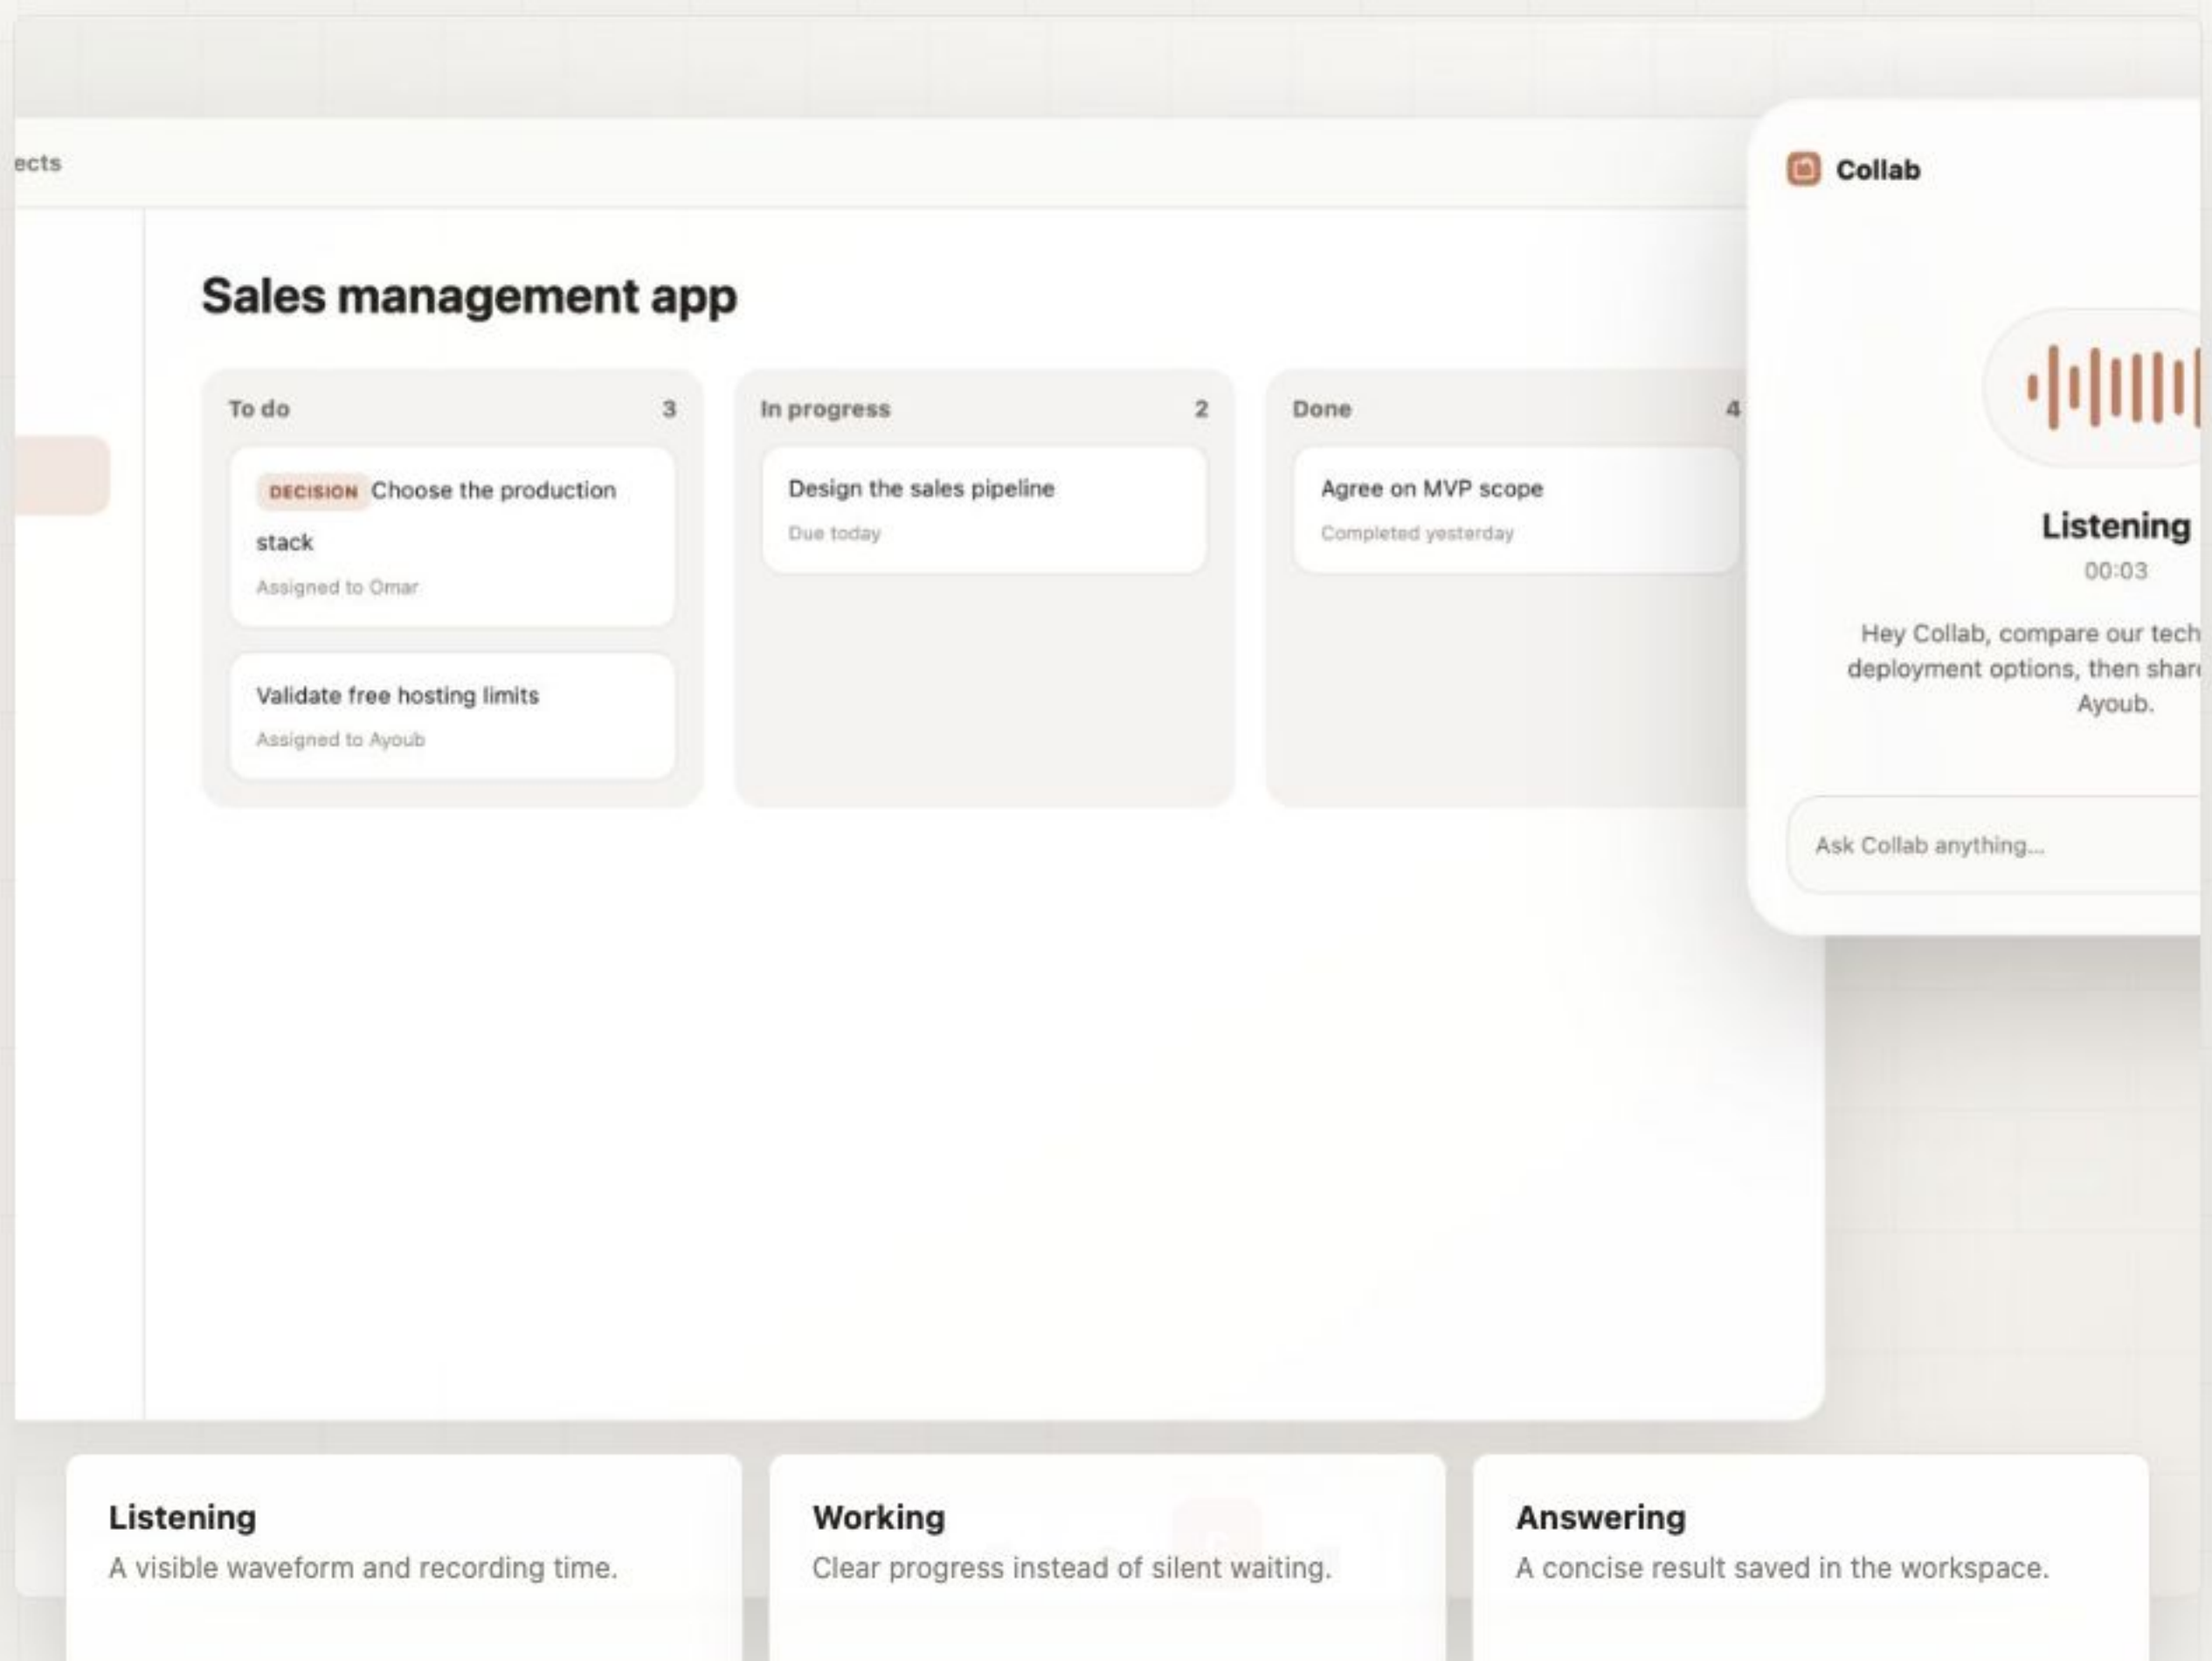

A focused assistant above your desktop, ready without interrupting the application already in front of you.

VOICE TO ACTION

Say the outcome. Not every step.

Speak naturally. Collab listens, understands the workspace and keeps you informed while it works.

The screenshot shows a workspace interface with a sidebar on the left containing a list of projects. The main area displays a project titled "Sales management app" with a Kanban board. The board has three columns: "To do" (3 items), "In progress" (2 items), and "Done" (4 items). The "To do" column contains two items: "DECISION Choose the production stack" (Assigned to Omar) and "Validate free hosting limits" (Assigned to Ayoub). The "In progress" column contains one item: "Design the sales pipeline" (Due today). The "Done" column contains one item: "Agree on MVP scope" (Completed yesterday). A Collab voice assistant overlay is positioned on the right side of the workspace. It features the Collab logo, a waveform icon, and the text "Listening 00:03". Below the waveform, it says "Hey Collab, compare our tech deployment options, then share with Ayoub." At the bottom of the overlay is a text input field with the placeholder "Ask Collab anything...".

Listening
A visible waveform and recording time.

Working
Clear progress instead of silent waiting.

Answering
A concise result saved in the workspace.

CONNECTED INTELLIGENCE

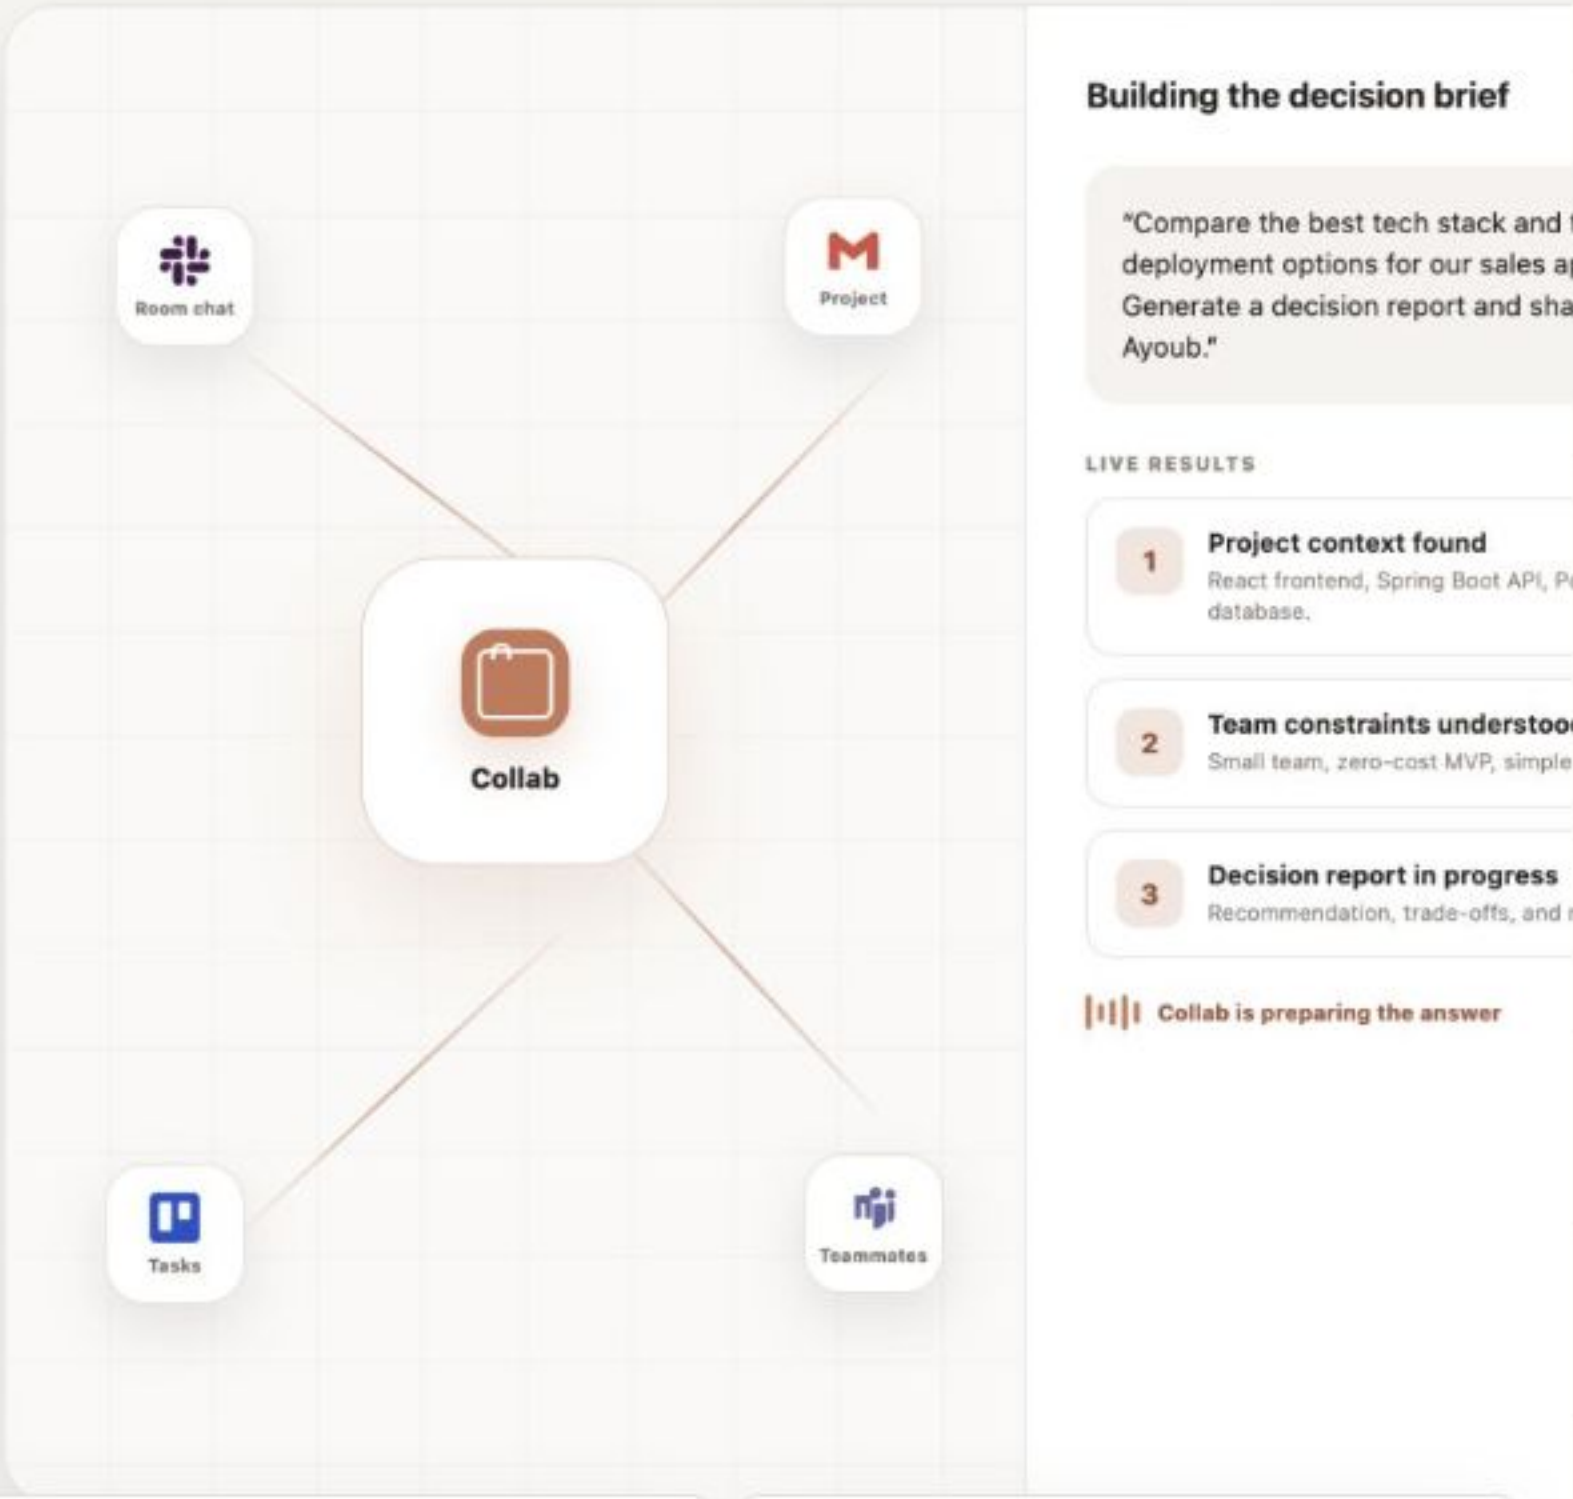

One request becomes a **shared brief.**

Collab brings together project context, tasks, teammates and room conversations before producing the answer.

Generated from Decision sprint - 3 participants

RECOMMENDATION

- ✓ **React + Spring Boot + PostgreSQL** matches the team's current skills and keeps the architecture
- ✓ **Netlify + Render** is the simplest zero-cost path for the frontend and API during the MVP.

NEXT ACTIONS

Deploy frontend

Omar - Today

Validate API limits

Ayoub - Today

AY Shared with Ayoub and saved in Summaries
